Chang Y.S., Huang C.J., Huang F.-L., Liu C.S., Lo T.-B.;
"Purification, characterization, and molecular cloning of
gonadotropin subunits of silver carp (Hypophthalmichthys molitrix).";
Gen. Comp. Endocrinol. 78:23-33(1990).
-!- FUNCTION: INVOLVED IN GAMETOGENESIS AND STEROIDOGENSIS.
-!- SUBGELLULAR LOCATION: SECRETED.
-!- SIMILARITY: BELONGS TO THE GLYCOPROFEIN HORMONES ALPHA CHAIN
FAMILY.
                                                                                                                                                                                                     CHAIN) (GTH-ALPHA).

Hypophthalmichthys molitrix (Silver carp).

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Actinopterygii;

Neopterygii; Teleostei; Euteleostei; Ostariophysi; Cypriniformes;

Cyprinoidea; Cyprinidae; Leuciscinae; Hypophthalmichthys.

MOL. Pharmacol. 53:1068-1075 (1998).

-!- FUNCTION: MAX ACT AS AN INDUCIBLE TRANSPORTER IN THE BILIARY AND INTESTINAL EXCRETION OF ORGANIC ANIONS.

-!- SUBCELLULAR LOCATION: INTEGRAL MEMBRANE PROTEIN.

-!- TISSUE SPECIFICITY: LONG AND INTESTINE, LOW IN LIVER. HIGHER IN LIVER OF EISAI HYPERBILIRUBINEMIC RATS AND TR(-) MUTANT RATS.

-!- SIMILARITY: BELONGS TO THE ATP-BINDING TRANSPORT PROTEIN FAMILY (ABC TRANSPORTERS). MRP SUBFAMILY.
                                                                 Gaps

RT "Fibronectin mRNA splice variant in articular cartilage lacks bases be concoding the V, III-15, and I-10 protein segments.";

RL J. Biol. Chem. 271:18954-18960[1966].

C. I- FUNCTION: FIBRONECTINS BIND CELL SURFACES AND VARIOUS COMPOUNDS INCLUDING COLLAGEN, FIBRIN, HEPARIN, DNA, AND ACTIN. FIBRONECTINS ARE INVOLVED IN CELL ADHESION, CELL SHAPE.

C. I- FUNCTION: VARIANT (V-C)- IS PROBABLY INVOLVED IN MATRIX ORGANIZATION OF CARTILAGE.

C. I- SUBUNIT: MOSTLY HETERODIMERS OR MULTIMERS OF ALTERNATIVELY SPLICED VARRANTS. CONNECTED BY 2 DISGLEIDE BONDS NEAR THE CARBOXYL ENDS;

C. I- SUBUNIT: MOSTLY HETERODIMERS OR MULTIMERS OF ALTERNATIVE PRODUCTS: EACH OF THE "EXTRA DOMAIN" & THE CONNECTING STRAND 3 ARE PRESENT IN SOME FORMS OF FIBROMECTIN AND ABSENT IN OTHERS. THESE DIFFERENCES ARE DUE TO ALTERNATIVE SPLICING. VARIANT (V+C)- LACKS REPERAT IS OF FIBROMECTIN TYPE-III, REPEAT 10 OF FIBROMECTIN TYPE-IIIAR AMPRIX. VARIANT (V+C)- IS THE MAJOR TRANSCRELULAR RAFIRS. THERE DIMERIC CROSS-LINKED MULTIMERIC FORMS), MADE BY FIBROBLASTS, EPITHELIAL AND OTHER CELL TYPES, IS CORNES, DONE, ADDRA AND SKIN; ABSENT FROM LIVER, SPLEEN, TANDER AND SKIN, ABSENT FROM LIVER, SPLEEN, TANDER AND TA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  DOMAIN
           ORGANIZATION: VARIANT (V+C)- IS PROBABLY INVOLVED IN MATRIX
ORGANIZATION OF CARTILAGE.
-!- SUBUNIT: MOSTLY HETERODIMERS OR MULTIMERS OF ALTERNATIVELY SPLICED
VARIANTS, CONNECTED BY 2 DISTLFIDE BONDS NEAR THE CARBOXYL ENDS;
TO A LESSER EXTEND HOMODIMERS.
-!- ALTERNATIVE PRODUCTS: EACH OF THE "EXTRA DOMAIN" & THE CONNECTING
STRAND 3 ARE PRESENT IN SOME FORMS OF FIBRONECTIN AND ABSENT IN
OTHERS. THESE DIFFERENCES ARE DUE TO ALTERNATIVE SPLICING. VARIANT
(V+C)- LACKS REPEAT 15 OF FIBRONECTING STRAND 3.
-!- TISSUE SPECIFICITY: PLASMA FN (SOLUBLE DIMERIC FORM) IS SECRETED
BY HEPATOCYTES. CELLULAR FN (SOLUBLE DIMERIC FORM)
FORMS), MADE BY FIBROBLASTS, EPITHELIAL AND OTHER CELL TYPES, IS
DEPOSITED AS FIBRILS IN THE EXTRACELLULAR MATRIX. VARIANT (V+C)-
IS THE MAJOR TRANSCRIPT IN ARTICULAR CARTILAGE, BUT IT IS ABSENT
                                                                                                                                                                                                                                                                                                                                                                                                                                           This SWISS-PROT entry is copyright. AMERICAL STRUCTURE TO THE STRUCTURE STRUCTURE STRUCTURE STRUCTURE STRUCTURE STRUCTURE STRUCTURE AND ADDAY;

REPOSTOR R.W., Krueger S., Torchia D.A.;

REPOSTOR STRUCTURE and dynamics of linked cell attachment modules of mouse fibronectin containing the RGD and synergy regions: comparison with the human fibronectin crystal structure.";

J. Mol. Biol. 277:663-682(1998).

C. - FUNCTION: FIBRONECTINS BIND CELL SURFACES AND VARIOUS COMPOUNDS.

INCLUDING COLLAGEN, FIBRIN, BEPARIN, DNA, AND ACTIN. FIBRONECTINS ARE INVOLVED IN CELL ADHESION, CELL MOTILITY, OPSONIZATION, WOUND.

C. - FUNCTION: AND MATNERANCE OF CELL SHAPE.

C. - SUBDNIT: MOSTLY HETERODIMERS OF MILTERES OF ALTERNATIVELY SPLICED VARIANTS, CONNECTED BY 2 DISULFIDE BONDS NEAR THE CARBOXYL ENDS;

C. - ALTERNATIVE PRODUCTS: EACH OF THE "EXTRA DOMAIN" & THE CONNECTING STRAND 3 ARE PRESENT IN SOME FORMS OF FIBRONECTIN AND ABSENT IN CHERS. THESE DIFFERENCES ARE DUE TO ALTERNATIVE SPLICING.

C. - ALTERNATIVE SPECIFICITY: PLASMA FN (SOLUBLE DIMERIC FORM) IS SECRETED BY HERPATCYTES. CELLULAR FN (DIMERIC OR CROSS-LINKED MULTIMERIC FORMS), MADE BY FIBROBLASTS, EPITHELIAL AND OTHER CELL TYPES, IS DEPOSITED AS FIBRILS IN THE EXTRACELLULAR MATRIX.

C. - SIMILARITY: CONTAINS 17 FIBRONECTIN TYPE II DOMAINS.

C. - SIMILARITY: CONTAINS 17 FIBRONECTIN TYPE III DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This SWISS-PROT entry is copyright. J. BIOCHEM. 234:116-124(1995).

-I. FUNCTION: THE GIVEINE CLEAVAGE SYSTEM CATALYSES THE DEGRADATION OF GILYCINE.

-I. FUNCTION: THE GIVEINE CLEAVAGE SYSTEM CATALYSES THE DEGRADATION OF GILYCINE.

-I. GILYCINE. THE PROTEIN BINDS THE ALPHA-AMINO GROUP OF GILYCINE

THROUGH ITS PYRIDOXAL PHOSPHATE COFACTOR: COS 1S RELEASED AND

THE REMAINING METHYLAMINE MOIETY IS THE THEN TRANSFERRED TO THE

LIPOAMIDE COPACTOR OF THE H PROTEIN.

-I. CATALYTIC ACTIVITY: GLYCINE + LIPOYLPROTEIN = S-AMINOMETHYL-

DIHYDROLIPOYLDROFEN + CO(2).

-I. COFACTOR: PYRIDOXAL PHOSPHATE.

-I. COFACTOR: PYRIDOXAL PHOSPHATE.

-I. SUBCELLUIAR LOCATION: MITOCHONDRIAL.

In PROUGH ITS PYRIDOXE PHOSPHATE COFACTOR, CO(2) IS RELEASED AND THE REMAINING METHYLAMINE MOIETY IS THE THEN TRANSFERRED TO THE LIPOALIDE COFACTOR OF THE H PROTEIN.

IN PROMISE ACTIVITY: GLYCINE + LIPOYLPROTEIN - S-AMINOMETHYL-DIATALYTIC ACTIVITY: GLYCINE PHOSPHATE.

IN COFACTOR: PYRIDOXAL PHOSPHATE.

IN COFACTOR: PYRIDOXAL PHOSPHATE.

IN COMPOSED OF FOUR PROTEINS: P, I, L, AND H.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This SWISS-PROT entry is copyright.  "P-protein of glycine decarboxylase from Flaveria pringlei.";
Plant Physiol. 104:1077-1078(1994).

-!- FUNCTION: THE GLYCINE CLEAVAGE SYSTEM CATALYSES THE DEGRADATION OF GLYCINE. THE PROTEIN BINDS THE ALPHA-AMINO GROUP OF GLYCINE THROUGH ITS PYRIDOXAL PHOSPHATE COFACTOR; CO(2) IS RELEASED AND THE REMAINING METHYLAMINE MOIETY IS THE THEN TRANSFERRED TO THE LIPOAMIDE COFACTOR OF THE H PROTEIN.

-!- CATALYTIC ACTIVITY: GLYCINE + LIPOYLPROTEIN = S-AMINOMETHYL-
                                                                                                                                     -i- SUBUNIT: HOMODIMER (BY SIMILARITY). THE GLYCINE CLEAVAGE SYSTEM IS COMPOSED OF FOUR PROPEINS: P, T, L, AND H.
-i- SUBCELLULAR LOCATION: MITOCHONDRIAL.
-i- SIMILARITY: TO OTHER GLYCINE CLEAVAGE SYSTEM P-PROTEIN.

FLAGELLAR ORGANELLE AND CONSISTS OF FIVE RINGS (E,L,P,S, AND M) MOUNTED ON A CENTRAL ROD. THE M RING IS INTEGRAL TO THE INNER MEMBRANE OF THE CELL AND MAY BE CONNECTED TO THE FLAGELLAR ROD VIA THE S RING. THE L AND P RINGS LIE IN THE OUTER MEMBRANE AND THE PERIPLASMIC SPACE, RESPECTIVELY (BY SIMILARITY).
-!- SIMILARITY: BELONGS TO THE FLGI FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
